 $Lifting \ heights \ of \ more \ than \ 3.750 \ mm \ require \ an \ electric \ spring \ cable \ drum. \ See \ accessories \ in \ the \ pricelist.$

KAUP

Push-Pull with sheet saver T145S

Specification:

Mounted directly on to the fork carriage

the KAUP Push-Pull with sheet saver T145S is the right choice when slip-sheets are regularly used as transport mode. In order to separate the complete load from the slip-sheet during pushing, the attachment is fitted with a so called pallet retainer. It grips the slip-sheet firmly while the load is pushed off so that the slip-sheet can be used several times.

Like all other KAUP Push-Pulls, this range also has a large surfaced carrying plate for transportation of palletless loads.

Qualities:

- Solid construction
- · Good visibility conditions through the attachment
- Good residual capacity
- Self supporting scissor system
