## Specification:

The Foldable Forks T180KH of KAUP are

used where shortage of space (for example lift use) or internal

transport makes it sometimes necessary to fold on the forks. For it the

forks are hung up directly in the fork carriage and are opened

hydraulically.

Moreover, the foldable forks can also be combined with other attachments of KAUP, for example bale clamps.

## Qualities:

- Robust construction
- An easy assembly
- · Very good visibility conditions
